Bilateral Meetings

- Thursday 15:00 - 18:00

Description

KeteaTech Maritime Fleet Intelligence collects sensor data generated by ships at the sea and transmits them to a secure data storage several times a day. A web service enables remote view of the current status of each ship. The whole set of sensor data is analyzed with Big Data technologies to reduce fleet operating costs by predictive maintenance, superior weather forecast and advanced utilization estimation and is presented in easily accessible reports once a day.
